

EXPERIMENT 34

Platform as a Service (PaaS) — Ubuntu Server 22.04 LTS VM

AIM

To create and configure an Azure virtual machine using the Ubuntu Server 22.04 LTS image.

PROCEDURE

1. Open Virtual Machines and select Create → Azure virtual machine.
2. Select subscription and resource group.
3. Enter VM name and region.
4. Select Ubuntu Server 22.04 LTS — x64 Gen2.
5. Choose a suitable small VM size for laboratory use.
6. Configure administrator authentication using SSH.
7. Review disks, networking and management settings.
8. Select Review + create and deploy.
9. Verify the VM status on the Overview page.

IMPLEMENTATION

The VM is configured from the Ubuntu Server 22.04 LTS marketplace image. Azure provisions the compute, disk and network resources associated with the VM.

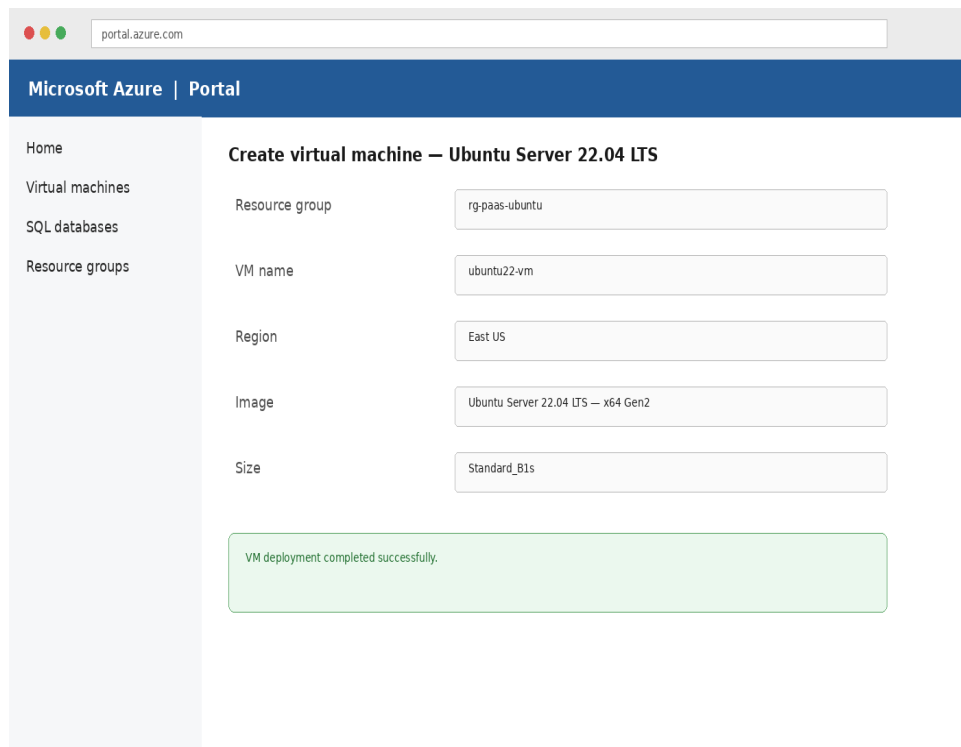

Figure 1: Illustrative Azure Portal implementation view.

RESULT

Ubuntu Server 22.04 LTS VM was successfully configured in Azure.
