

EXPERIMENT 36

Platform as a Service (PaaS) — Microsoft Windows 10 VM

AIM

To create and configure an Azure virtual machine using a supported Microsoft Windows 10 image.

PROCEDURE

1. Open Virtual Machines and select Create → Azure virtual machine.
2. Select subscription and resource group.
3. Enter VM name and region.
4. Select a supported Windows 10 image, using Gen2 where available.
5. Choose a suitable VM size.
6. Configure administrator credentials.
7. Review storage, networking and security settings.
8. Select Review + create and deploy.
9. Verify the VM deployment status.

IMPLEMENTATION

The Windows 10 VM is provisioned from a supported marketplace image and Azure automatically creates the required infrastructure resources.

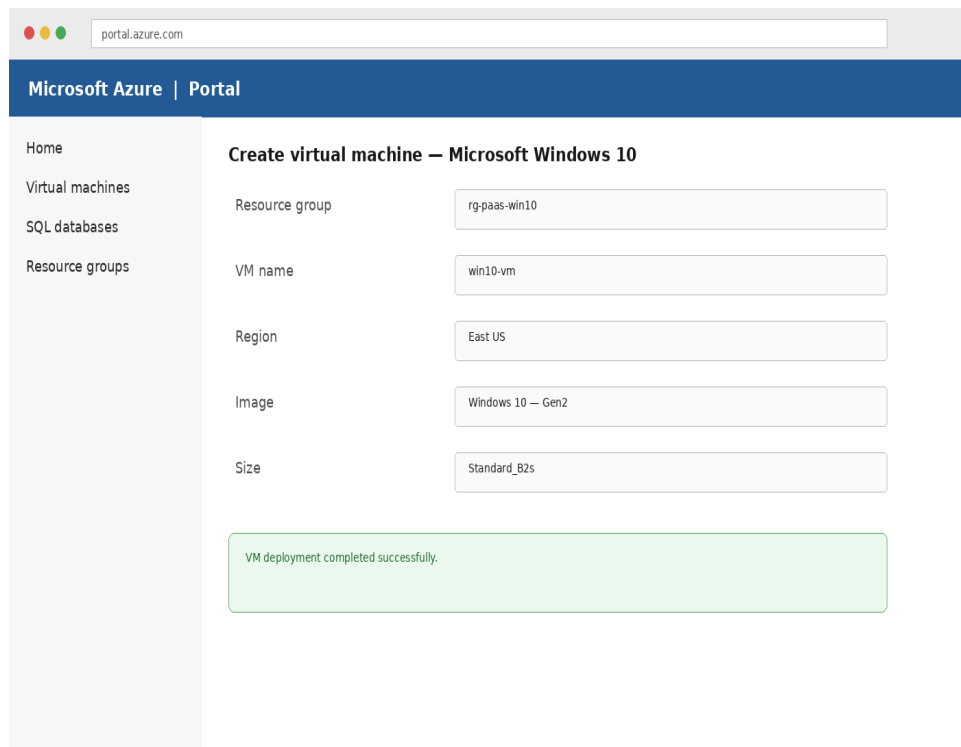

Figure 1: Illustrative Azure Portal implementation view.

RESULT

Microsoft Windows 10 VM was successfully configured in Azure.
