

EXPERIMENT 37

Platform as a Service (PaaS) — Windows Server 2019

AIM

To create and configure an Azure virtual machine using a Windows Server 2019 image.

PROCEDURE

1. Open Virtual Machines and select Create → Azure virtual machine.
2. Select subscription and resource group.
3. Enter VM name and region.
4. Choose Windows Server 2019 Datacenter or the required supported image.
5. Select a small VM size for laboratory use.
6. Configure administrator credentials.
7. Review disk, networking and management settings.
8. Select Review + create and Create.
9. Verify deployment on the VM Overview page.

IMPLEMENTATION

The VM is configured using a Windows Server 2019 marketplace image. Azure provisions the required compute, storage and network resources.

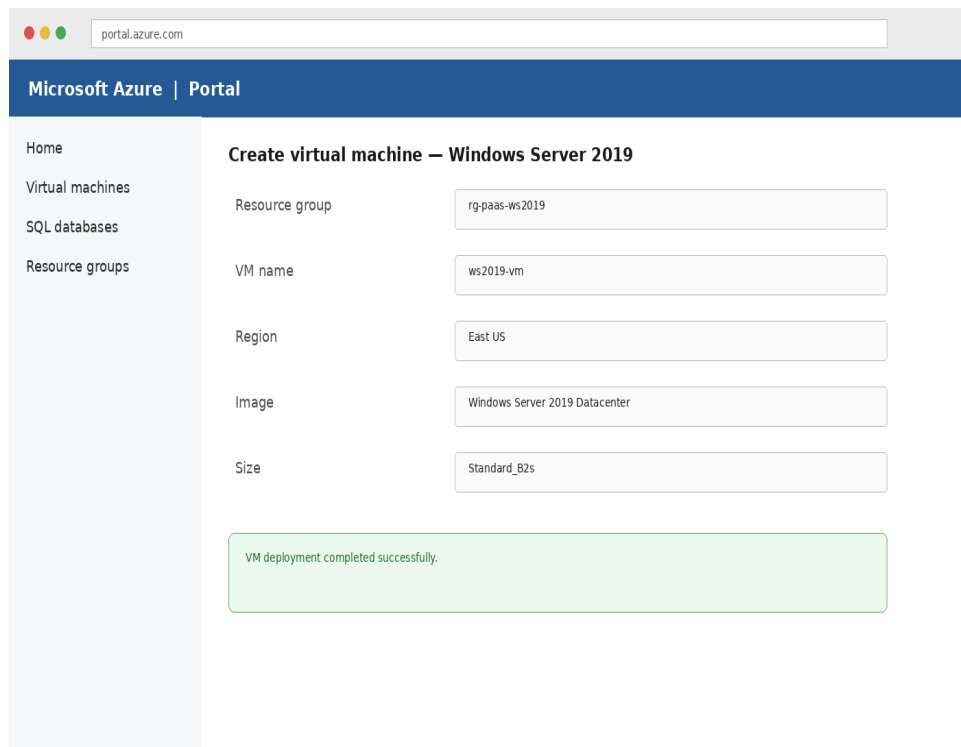

Figure 1: Illustrative Azure Portal implementation view.

RESULT

Windows Server 2019 VM was successfully configured in Azure.
