

14. Create a Virtual Hard Disk and allocate the storage using VM ware Workstation.

AIM:

To create a Virtual Hard Disk and allocate 3 GB storage using VMware Workstation.

PROCEDURE:

Step 1: Open VMware Workstation on your computer.

Step 2: Click Create a New Virtual Machine and choose the required virtual machine configuration.

Step 3: Select Create a New Virtual Disk when prompted for disk configuration.

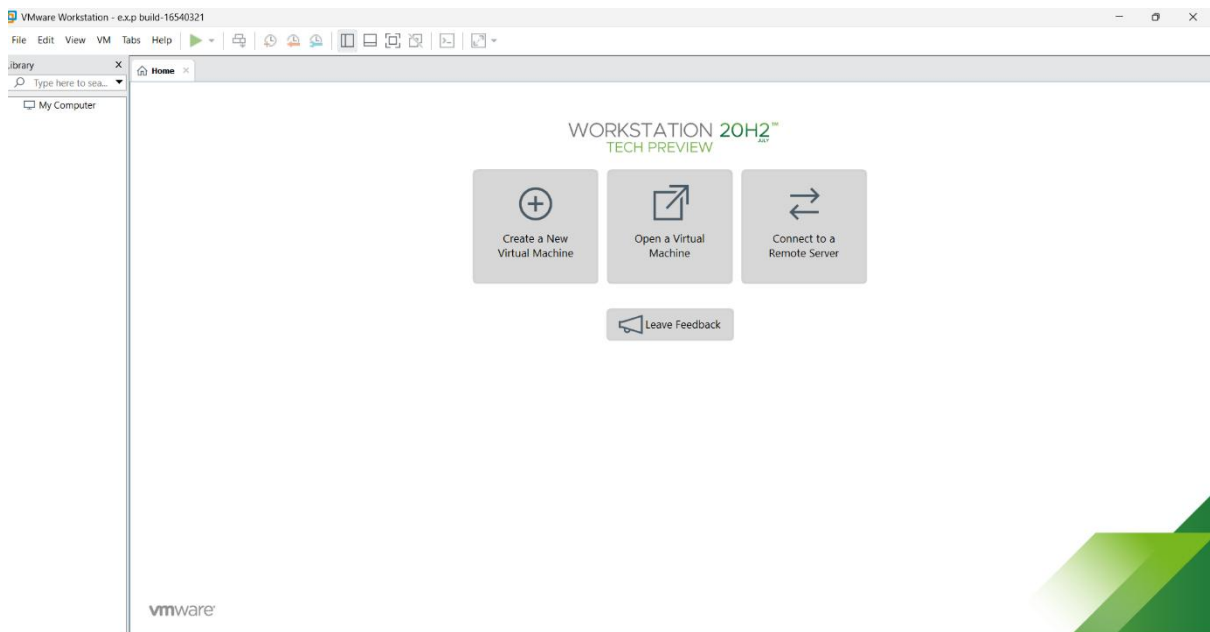

Step 4: Enter the Maximum Disk Size as 3 GB.

Step 5: Choose Store virtual disk as a single file (or Split into multiple files, if required).

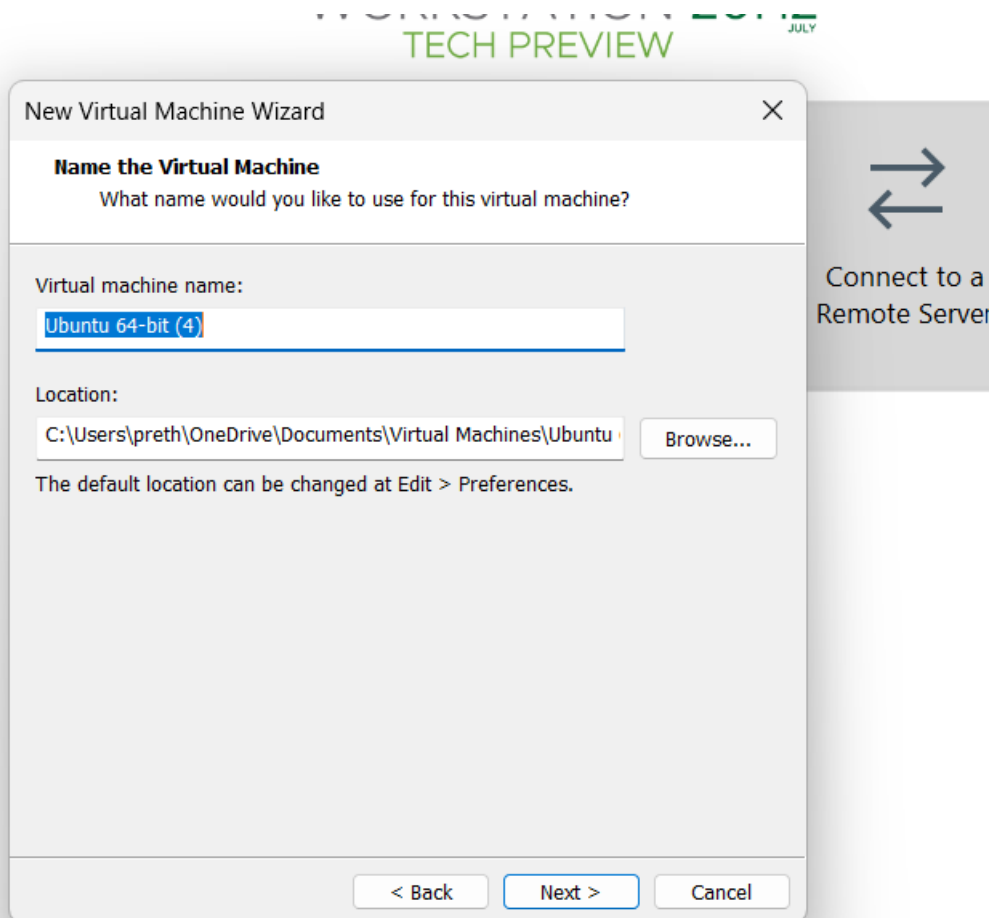

Step 6: Click Finish to create and allocate the virtual hard disk.

Step 7: Verify that the virtual machine is configured with a 3 GB virtual hard disk

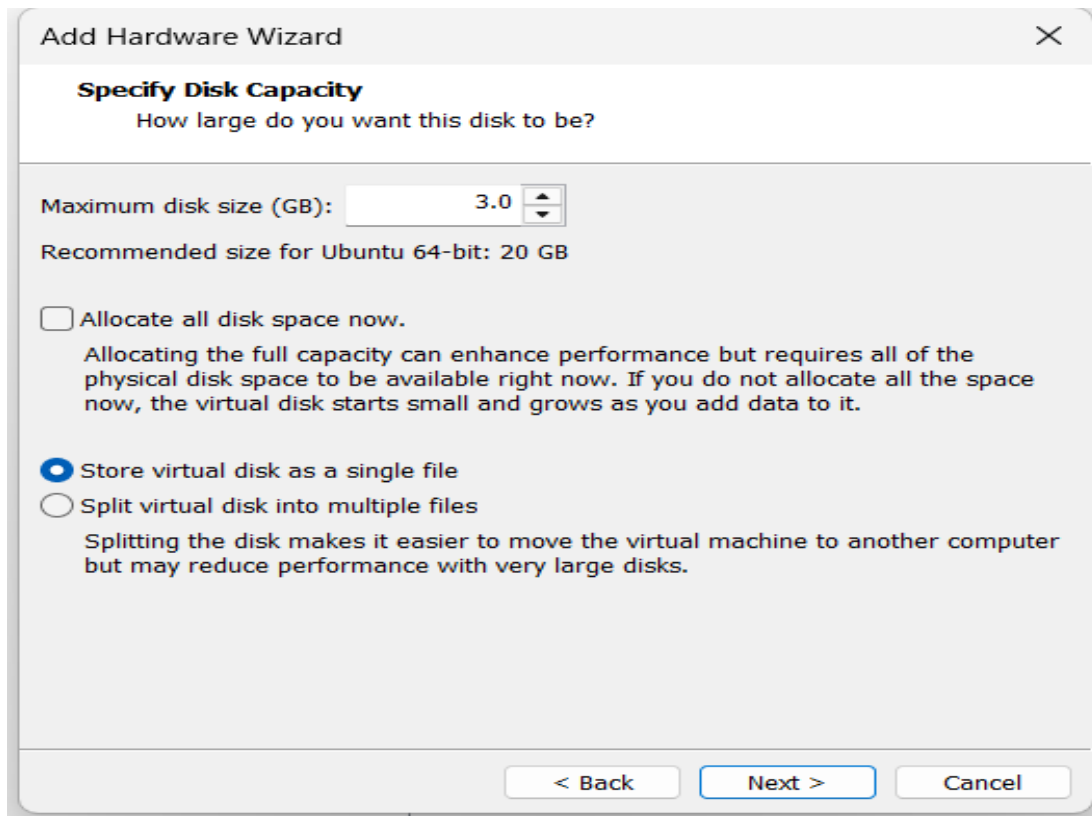

STEP 1:

STEP 2:

STEP 3:

The image shows a 'Specify Disk Capacity' dialog box from the 'Add Hardware Wizard'. It has a title bar with a close button. The main content area is divided into sections. The first section has a title 'Specify Disk Capacity' and a question 'How large do you want this disk to be?'. Below this is a 'Maximum disk size (GB):' label followed by a text input field containing '3.0' and a spinner control. The next line says 'Recommended size for Ubuntu 64-bit: 20 GB'. There are two radio button options. The first is 'Allocate all disk space now.' with a description: 'Allocating the full capacity can enhance performance but requires all of the physical disk space to be available right now. If you do not allocate all the space now, the virtual disk starts small and grows as you add data to it.' The second is 'Store virtual disk as a single file' which is selected, with a description: 'Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.' At the bottom are three buttons: '< Back', 'Next >', and 'Cancel'.

Add Hardware Wizard

Specify Disk Capacity
How large do you want this disk to be?

Maximum disk size (GB): 

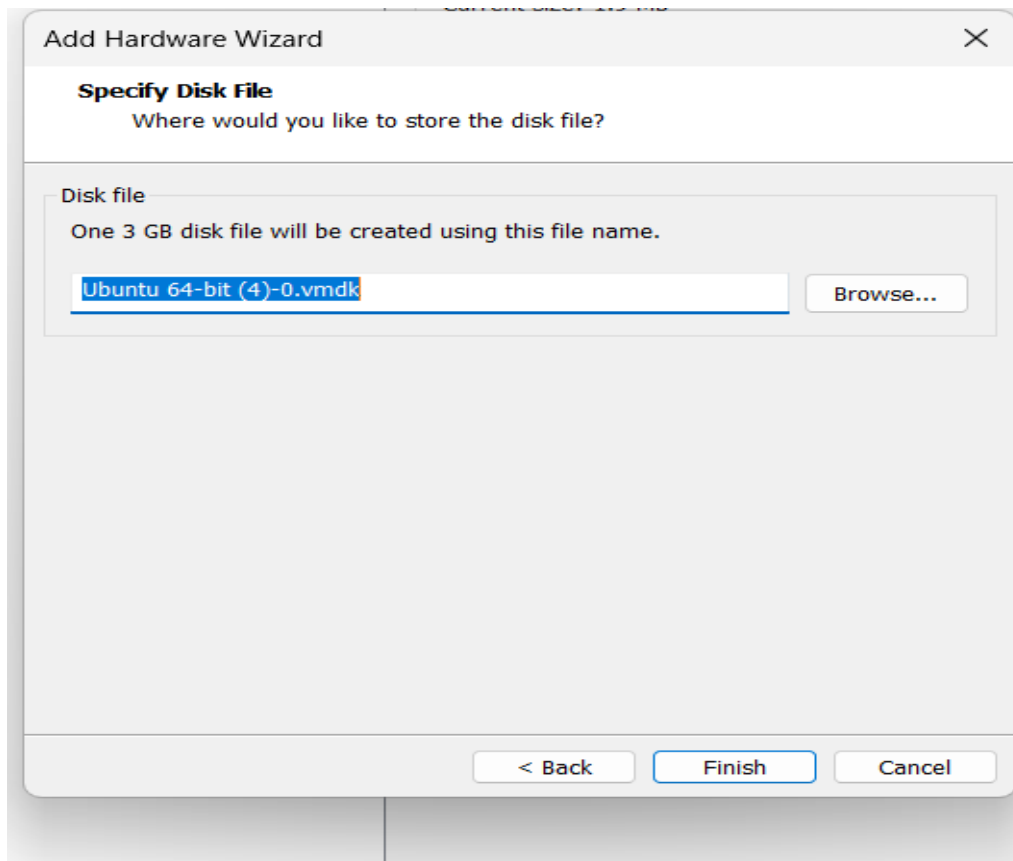

Recommended size for Ubuntu 64-bit: 20 GB

☐ Allocate all disk space now.
Allocating the full capacity can enhance performance but requires all of the physical disk space to be available right now. If you do not allocate all the space now, the virtual disk starts small and grows as you add data to it.

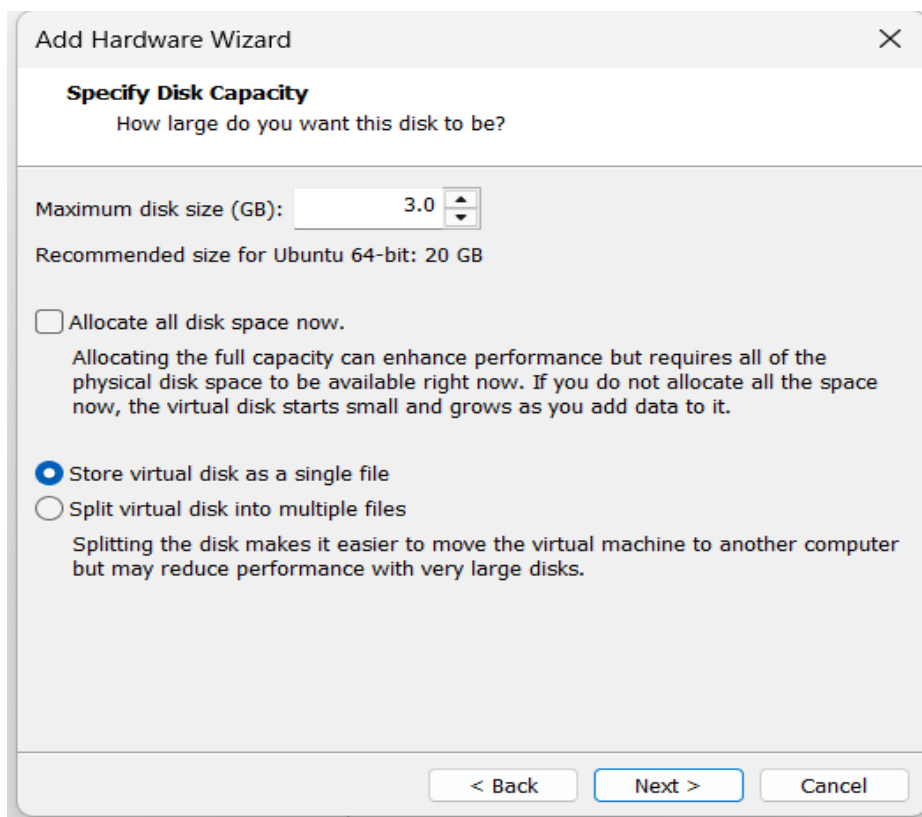

☒ Store virtual disk as a single file
☐ Split virtual disk into multiple files
Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.
