

EXP 12: 12. Demonstrate virtualization by Installing Type-2 Hypervisor in your device,create and configure VM image with a Host Operating system (Either Windows/Linux).

Aim:

To demonstrate virtualization by installing a Type-2 Hypervisor, creating and configuring a Virtual Machine (VM) with a Windows/Linux guest operating system.

Procedure:

Step 1: Download and install a Type-2 Hypervisor (VMware Workstation or Oracle VirtualBox) on the host computer.

Step 2: Open the hypervisor and click Create New Virtual Machine.

Step 3: Select the Windows/Linux ISO file and choose the guest operating system.

Step 4: Allocate the required resources (e.g., 1 CPU, 2 GB RAM, and 15 GB virtual disk) to the VM.

Step 5: Complete the virtual machine creation and power it on.

Step 6: Install the Windows/Linux operating system by following the on-screen installation steps.

Step 7: Log in to the guest operating system and verify that the virtual machine is running successfully.
