

EXPERIMENT: 21.

Install Virtualbox/VMware Workstation with different flavours of linux or windows OS on top of windows 7 or 8.

AIM

To install Oracle VirtualBox on a Windows 7 or Windows 8 host system and create a virtual machine to install and run a Linux operating system as a guest OS.

PROCEDURE

1. Start the Windows 7/8 host system and install Oracle VirtualBox by following the installation wizard.
2. Open Oracle VirtualBox and select New to create a virtual machine. Enter Ubuntu as the VM name, select Linux as the type, and choose Ubuntu (64-bit) as the version.
3. Allocate suitable resources to the virtual machine, such as 2 GB RAM, 2 processors, and a 20–25 GB virtual hard disk, depending on the available system resources.
4. Create the virtual hard disk using VDI (VirtualBox Disk Image) with Dynamically Allocated storage.
5. Open Settings → Storage, select the virtual optical drive, and attach the downloaded Ubuntu ISO image.
6. Start the Ubuntu virtual machine and follow the installation wizard. Install Ubuntu on the virtual hard disk and create the required user account and password.
7. Restart the virtual machine and verify that Ubuntu successfully boots inside VirtualBox while Windows 7/8 continues to operate as the host operating system.

IMPLEMENTATION:

Create Virtual Machine

Virtual machine Name and Operating System

Please choose a descriptive name and destination folder for the new virtual machine. The name you choose will be used throughout VirtualBox to identify this machine. Additionally, you can select an ISO image which may be used to install the guest operating system.

Name: ✓

Folder:

ISO Image:

Edition:

Type: 64

Version:

☐ Skip Unattended Installation

No ISO image is selected, the guest OS will need to be installed manually.

Create Virtual Machine

Hardware

You can modify virtual machine's hardware by changing amount of RAM and virtual CPU count. Enabling EFI is also possible.

Base Memory: 4 MB 16384 MB

Processors: 1 CPU 20 CPUs

☒ Enable EFI (special OSes only)

RESULT

Oracle VirtualBox was successfully installed on the Windows 7/8 host system, and Ubuntu Linux was successfully installed as a guest operating system in a virtual machine.
